Immunochemistry

Regional Editors

Prof. DAN H. CAMPBELL (Chairman), *California Institute of Technology, Department of Chemistry, Pasadena, California, U.S.A.*

Prof. FRED KARUSH, *Department of Microbiology, School of Medicine, University of Pennsylvania, Philadelphia, Pennsylvania, U.S.A.*

Prof. ALAIN BUSSARD, *Institut Pasteur, 25 rue du Docteur Roux, Paris, France.*

Prof. HENRI ISLIKER, *Université de Lausanne, Institut de Biochimie, 21 rue du Bugnon, Lausanne, Switzerland.*

Honorary Editorial Board

FREDERICK ALADJEM
Los Angeles, California

R. BACKHAUSZ
Budapest, Hungary

ELMER L. BECKER
Washington, D.C.

JOHN R. CANN
Denver, Colorado

MERRILL W. CHASE
New York, N.Y.

B. CINADER
Toronto, Canada

R. R. A. COOMBS
Cambridge, England

WALTER B. DANDLIKER
La Jolla, California

HAROLD F. DEUTSCH
Madison, Wisconsin

SHELDON DRAY
Bethesda, Maryland

RICHARD S. FARR
La Jolla, California

S. FAZEKAS DE ST. GROTH
Canberra, Australia

HUGH FUDENBERG
San Francisco, California

JUSTINE S. GARVEY
Pasadena, California

A. GUREVITCH
Moscow, U.S.S.R.

M. HASEK
Prague, Czechoslovakia

FELIX M. HAUROWITZ
Bloomington, Indiana

KIMISHIGE ISHIZAKA
Denver, Colorado

D. JANKOVIC
Belgrade, Yugoslavia

ELVIN A. KABAT
New York, N.Y.

LEONARD KORNGOLD

PRINTED IN GREAT BRITAIN IN THE CITY OF OXFORD AT THE ALDEN PRESS

Contents of Volume 1

April

D. H. Campbell: A Journal of Immunochemistry 1

J. F. Gerstein, L. Levine and *Helen Van Vunakis:* Altered antigenicity of pepsinogen and pepsin as an index of conformational change: effect of urea and reducing agents 3

S. J. Singer: On the heterogeneity of anti-hapten antibodies 15

M. Reichlin, M. Hay and *L. Levine:* Antibodies to human A_1 hemoglobin and their reaction with A_2, *S*, *C*, and *H* hemoglobins 21

J. L. Groff and *F. Haurowitz:* Comparison of the peptide maps of antibodies against an acidic and basic determinant group 31

P. J. Lachmann and *C. B. Richards:* An estimate of some molecular parameters of bovine conglutinin 37

L. Gyenes and *A. H. Sehon:* The use of tolylene-2,4-diisocyanate as a coupling reagent in the passive hemagglutination reaction 43

F. Franěk and *I. Říha:* Purification and structural characterization of 5*S* γ-globulin in new-born pigs 49

June

K. W. Pondman and *F. Peetoom:* The significance of the antigen–antibody complement reaction—IV. The transformation of β_1C-globulin into β_1A-globulin 65

V. P. Kreiter and *D. Pressman:* Fractionation of anti-*p*-azobenzenearsonate antibody by means of immunoadsorbents 91

Alice M. Gilman, A. Nisonoff and *S. Dray:* Symmetrical distribution of genetic markers in individual rabbit γ-globulin molecules 109

J. L. Fahey: Contribution of γ-globulin subunits to electrophoretic heterogeneity: identification of a distinctive group of 6·6*S* γ-myeloma proteins 121

H. J. Sage, Gloria F. Deutsch, G. D. Fasman and *L. Levine:* The serological specificity of the poly-alanine immune system 133

October

Nomenclature for human immunoglobulins 145

V. P. Kreiter and *D. Pressman:* Antibodies to a hapten with two determinant groups 151

W. B. Dandliker, H. C. Schapiro, J. W. Meduski, R. Alonso, G. A. Feigen and *J. R. Hamrick, Jr:* Application of fluorescence polarization to the antigen–antibody reaction. Theory and experimental method 165

A. L. Grossberg, C. C. Chen and *D. Pressman:* The effect of ethylene glycol on anti-hapten antibodies 193

K. Ishizaka, T. Ishizaka and *Evelyn M. Hathorn:* Blocking of Prausnitz-Küstner sensitization with reagin by '*A* chain' of human γ_{1A}-globulin 197

D. S. Berns and *S. J. Singer:* A fluorescence study of specific and non-specific dye–protein interactions 209

N. Weliky, H. H. Weetall, R. V. Gilden and *D. H. Campbell:* The synthesis and use of some insoluble immunologically specific adsorbents 219

Communications to the Editors

A. A. Amkraut: Determination of antibody–hapten binding constant by fluorescence enhancement 231

A. Malley, A. Saha and *D. H. Campbell:* Preliminary chemical investigations of a haptenic fraction isolated from Timothy grass pollen extracts 237

December

Z. Ovary: Antigenicity of hemoglobin and its constituents I. Antigenicity of human adult hemoglobin and its structural units (α and β chains) 241

I. Schechter, Sara Bauminger, M. Sela, D. Nachtigal and *M. Feldman:* Immune response to polypeptidyl proteins in rabbits tolerant to the protein carriers 249

K. W. Walton and *Sylvia J. Darke:* Immunological characteristics of human low-density lipoproteins 267

K. W. Walton: Apparent variation in the characteristics of human low-density liproproteins during immunoelectrophoresis in agar 279

J. E. Bata, L. Gyenes and *A. H. Sehon:* The effect of urea on antibody–antigen reactions 289

W. O. Weigle: Immunochemical properties of hemocyanin 295

J. Gelzer and *E. A. Kabat*: Specific fractionation of human anti-dextran antibodies—III. Fractionation of anti-dextran by sequential extraction with oligosaccharides of increasing chain length and attempts at sub-fractionation 303

E. Orlans, C. B. Richards and *M. E. Rose:* The composition of soluble complexes formed in antigen excess by fowl antibody to bovine-γ-globulin 317

Aims and Scope

Immunochemistry involves the specialized disciplines of many fields of physical, biological and medical iences. Most investigators who are interested in immunochemistry are specialists in one or more of these sciplines and, as a result, immunochemical literature appears in a wide variety of journals and other types publications. The purpose of the Journal *Immunochemistry* is to eliminate the necessity for such dispersed iblication by serving as a specific medium for material dealing with the chemical and physical aspects of imunology and related problems. The Journal is not intended to replace any of the present journals dealing ith general immunology but is to be more specifically a chemical journal dealing with antigens and antibodies, ysical aspects of immune mechanisms and methodology or investigations related to such subjects.

Four types of articles will be published. The first and major type will be original experimental investigations at have not been previously published and that can be considered as complete rather than preliminary ports. Full length papers of theoretical material will also be considered for publication. The second type ll be Communications to the Editors and will be limited to space which is equivalent to about 1000 words cluding tables, figures or illustrations. These may be preliminary reports of original work (not abstracts), eculative or theoretical material or a brief article of editorial nature dealing with some problem in immuno-emistry. Sufficient data or information must be presented to justify conclusions and must have the approval one of the members of the Editorial Board. The third and fourth types of material will be Book Reviews and mprehensive Critical Reviews of major problems of general interest. Both of the latter forms will usually by invitation only, but the Editors will also consider volunteer contributions of this nature at any time.

The first two or three years of this publication will be considered a period of initial growth and develop-ent. Consequently, some changes will undoubtedly be made during this period and the Editors welcome ggestions for modification. During this period, the Journal will be published quarterly.

Since this Journal is intended for international participation by investigators in the field of immunochemistry, anuscripts will be published in either English, French, German or Spanish. Pergamon Press will translate ussian manuscripts into English for review and if accepted, the publication will appear in English.

The contents of contributions shall be the sole responsibility of the Authors. Publication shall not imply e concurrence of the Editors or Publishers with the Author's interpretations, conclusions or validity of data.

Notes for Contributors

Submission of manuscripts. Manuscripts should be sent to one of the Regional Editors. Contributions m France should be sent to Professor Bussard; those from Switzerland and the British Isles should be sent Professor Isliker. Manuscripts from other European countries, Australia and Africa may be sent to either the above two Editors. Manuscripts from the Eastern United States, Eastern Canada, Mexico, and South merica, should be sent to Professor Karush; those from the Western United States, Canada and Asia should sent to Professor Campbell.

Form of contributions. Although manuscripts may be submitted in either English, French, German, anish or Russian, publication will be limited to the first four. Russian manuscripts will be translated and blished in English if approved. All papers must have an accompanying abstract in English as well as in the nguage used for the article. All contributions must be submitted in typewritten duplicates and with lines least double spaced and with margins which provide sufficient space for notations. Submission of three pies of the manuscript will facilitate refereeing and rapid publication. Manuscripts dealing with experi-ental work should be divided into major sections such as Introduction (optional), Experimental (with aterials, Methods and Results) followed by Discussion, Conclusions and Bibliography. If a large number of breviations are used, e.g., sRNA, EA, Ag, EEM, etc., it may be advisable to include a glossary defining such rms.

The title, with authors and their affiliations, should be placed on a separate page. On the same page give abbreviated title to be used as a running headline.

References should be indicated consecutively as they appear in the text by superscript arabic numbers ith parentheses, e.g., Franklin[1]. The full references should be cited in a numbered list at the end of the per using the following style:

FRANKLIN E. C., FUDENBERG H., MELTZLER M. and STANWORTH D. R., *Proc. Nat. Acad. Sci.* **48**, 914 (1962).

SMITH R. T., *Advances in Immunology* (Edited by W. H. TALIAFERRO and J. H. HUMPHREY) Vol. 1, p. 67. Academic Press, New York (1961).

Footnotes. Statements or references which do not fit into the text of the paper or literature references ay be noted by the following symbols: *, †, ‡, §, starting afresh on each page, e.g., . . . crystalline trypsin *. otnotes should be typed at the bottom of the page on which they appear.

Tables. All tabular material, flow charts, etc., should be typed on a separate manuscript page and should intelligible without reference to the text. Headings should be concise, should clearly present the subject atter, and should be a part of the table. Footnotes to tables should also be placed on the same page and signations should use some system such as superscripts a, b, c, etc., instead of numbers.

Graphs and illustrations. Figures and illustrations should be included separately and not as part of the xt. They should be about twice the published size and be clearly marked on the back as to top, number and thor's name. Either the original or glossy prints may be used if care is taken in making good reproductions. dicate on the manuscript where figures or illustrations should be inserted. Legends should be given on a parate page and clearly present enough information to make the figure understandable. The following andard symbols should be used on line diagrams:

▲ △ ▼ ▽ ■ □ × + ● ○

General considerations. It is important to all concerned that a manuscript be carefully read for errors d clarity before sending to an Editor.

Reprints. Fifty reprints of each paper are supplied by the publisher free of charge and will be sent to the st-named author. Additional copies in multiples of 50 can be obtained at reasonable cost if ordered before blication, and an order form for this purpose will be sent to the author.
